EXPERIENCE

Software Developer Engineer (Full-Time)

PE Front Office

📅 May 2026 – Present 📍 Gurugram, India

- Building scalable **LAMP stack applications** with optimized back-end logic, clean RESTful API design, and efficient relational database architecture for enterprise-grade workflows.
- Actively contributing to production feature development, database query optimization, and cross-team integration across core business modules.

Software Developer Intern

AventIQ (Mittal Software Labs)

📅 Jan 2026 – April 2026 📍 Delhi, India

- Worked on the **GreenLeaf Platform (Client Project)**, revamping UI across major sections and building **Audit Log** and **Activity Log** systems from scratch to enable complete traceability of user actions and system events.
- Implemented complete **Role-Based Access Control (RBAC)** across GreenLeaf and TMS with multiple access levels including **Admin, Manager, Employee, Client Manager, and Project Manager**, ensuring fine-grained permission handling and stronger application security.
- Optimized frontend and backend performance using **Redis caching, React Query, Redux, and debouncing**, reducing redundant API calls, minimizing re-renders, lowering server load, and improving responsiveness by nearly **30–40%**.
- Built a complete **Task Management System (TMS)** from scratch, developing backend APIs for project creation, task/subtask management, employee assignment, timesheet logging, approval workflows, Event Bridge auto timesheet logging using **AWS Lambda**, and an automatic non-productive hours logger integrated with EMS APIs and shared databases.

LEADERSHIP & INVOLVEMENT

Open Source Contributor – GSSoC'25

GirlScript Summer of Code 2025

- Contributed to [TravelGrid](#) with **5+ merged PRs** (#194, #490, #497, #510, #512), earning the **GitHub Pull Shark** badge.

Co-Director, Technical Team

CodeSpace Club, GLBITM

- Led core website module development, authoring **75%+ of the codebase** across frontend UI and backend logic, while mentoring junior members on clean code practices and deployment workflows.

ACHIEVEMENTS

- Founded **GL PeerBajaj**, a peer mentorship platform connecting GLBITM students with seniors: [Website](#) | [GitHub](#) | [Instagram](#) | [LinkedIn](#)
- Made **400+ GitHub contributions in 2025** across personal projects and open-source repositories.
- Solved **600+** coding problems on [LeetCode](#) with a competitive rating of **1450+**.
- Ranked **Top 8763 out of 22,000+** participants in a national LeetCode competitive programming contest.
- Competed in **3+ national-level hackathons**: [SIH 2024](#), [SIH 2025](#), [Finxthon by Q2](#), [DevOn](#)

TECHNICAL SKILLS

- Languages:** C++, Java, JavaScript, Dart, PHP, Python, SQL
- Frameworks & Libraries:** Node.js, Express.js, React.js, Redux, Flutter, Bootstrap, Tailwind CS, Cypress, Scikit-Learn
- Tools & Platforms:** Git, GitHub, Postman, VS Code, Render
- Databases & Cloud:** MongoDB, MySQL, AWS (Lambda, EventBridge, S3), Redis, Apache, Linux
- Generative AI:** LangChain, RAG, Vector Databases, AI Agents, MCP Servers, Embeddings, Tokenization, LLM Applications
- Data Analytics & ML:** Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Power BI, Data Preprocessing, Feature Engineering, Model Evaluation
- Concepts:** DSA, MERN, LAMP, RBAC, REST APIs, React Query, App Dev, SEO, Testing

EDUCATION

B.Tech. (IT) – CGPA: 8.1

G L Bajaj Institute of Technology & Management

📅 2022 – 2026 📍 Greater Noida, UP

CERTIFICATIONS

- Data Analytics – Deloitte** (Ongoing)
- MERN Stack – Apna College** Certificate

PROJECTS

Dev2Gether – Real-Time Collaborative IDE

Tech Stack: MERN Stack, Monaco Editor, Socket.io

- Built a real-time collaborative IDE with **AI assistant** integration, multi-language code execution, and live cursor syncing across concurrent sessions with sub-100ms latency.
- Implemented room-based session management with secure JWT authentication, enabling seamless pair programming and team code reviews in a shared workspace.
- [GitHub](#) | [Live Demo](#)

IntelliBin – Smart Waste Classification System

Tech Stack: Python, OpenCV, YOLOv5, CNN, Arduino

- Built an AI-powered **smart waste classification system** using **YOLOv5, CNN**, and **OpenCV** to detect and classify waste in real time for automated segregation.
- Developed a complete detection pipeline with image preprocessing, object classification, and live monitoring, improving waste sorting accuracy and reducing manual intervention.
- Integrated hardware components using **Arduino** for automated waste handling and designed a real-time monitoring workflow for smart bin operations.
- [GitHub](#) | [Live Demo](#)

Mini Projects

- NotesTaking App** (Python, Django) – [GitHub](#) | [Website](#)
- Issue Tracker** (Java, Spring Boot) – [GitHub](#) | [Website](#)
